PT Agonist antibodies which activate specific protein tyrosine
PT Agonist antibodies which activate chimeric proteins of kinase extracellular
PT Agonist antibodies which activate chimeric proteins of kinase extracellular
PT domain and Ig constant domain, useful for studying, and therapeutic
PT modulation of, cell growth and differentiation
PS Disclosure; Page 88-92; 125pp; English
CC DNA probes based on protein tyrosine-kinase (pTK) sequences were used
CC to screen cDNA libraries to identify novel pTK genes. The bpTKs,
CC bpTKl, bpTK2, bpTK3, bpTK4, bpTK5 and bpTK7 (R85924-28 and R85935,
CC respectively) are expressed in human brain tissue and show homology
CC to known pTKs. A full-length sequence for the bpTK7 gene (T03100)
CC was obtd. This gene may be used to design new drugs, peptides and
CC antisense constructs that modulate pTK activity.

HEK7, HEK7 and HEK8 show extensive homology to the catalytic domain of chicken EPH-like receptors Cek5, Cek7 and Cek8. HEK11 shows no homology to any known EPH-like receptor. The isolated cDNAs are used for prodn. of recombinant HEKs and chimeric receptors, in hybridisation assays, and to detect abnormalities in HEK receptor genes.

CDNA cloning using adult mouse brains and MDK1 T2 (T32962), that coded for truncated versions (M03422 and M03423, respectively) of the novel mouse developmental kinase 1 (MDK1) (see also T32960), a new member of the eck/eph family of receptor tyrosine kinases.

MDK T1 and T2 each possess the entire ectodomain, the transmembrane domain and part of the juxtamembrane region of MDK1 (see also W03421), but lack the catalytic tyrosine kinase domain. They may have a modulatory function. The CDNA clones can be used to produce MDK1 T1 and T2, which are useful for screening potential agents for treatment of diseases characterised by abnormal signal transduction. CDNA cloning using adult mouse brains and Northern blotting dentified 2 clones, MDK1 T1 (T32961) and MDK1 T2 (T32962), that coded for truncated versions (W03422 and W03423; respectively) of the novel mouse developmental kinase 1 (MDK1) (see also T32960), a new member of the eck/eph family of receptor tyrosine kinases.

MDK T1 and T2 each possess the entire ectodomain, the transmembrane domain and part of the juxtamembrane region of MDK1 (see also W03421), but lack the catalytic tyrosine kinase domain. They may have a modulatory function. The cDNA clones can be used to produce MDK1 T1 and T2, which are useful for screening potential agents for treatment of diseases characterised by abnormal signal transduction. To isolate the clone, cDNA from mouse embryos was subjected to PCR amplification with primers based on conserved motifs (see also W03426-27) of RTKs. An amplified fragment was used to screen an 11.5-day-old mouse embryo and an adult mouse brain cDNA library to obtain the MDK1 clone. 4 Sequence variants (see also T32961-62 and W03422-25) of MDK1 were also identified. MDK1 nucleic acids can be used for the recombinant prodn. of MDK1, as probes to detect MDK1, and for the gene therapy of diseases involving abnormalities in signal transduction, such as neurodegenerative and neuroproliferative disorders and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diagnosis

Novel EPH-related PTK cDNA clone Cek7 (given in 090653) and its variant Cek7+ (090661) were isolated from a chick embryo library in lambda gtl1, and another variant, Cek7' (090662), from a chick embryonic brain cDNA library in lambda gtl1. The variants may originate via alternative splicing of the same gene. Cek7 had the lowest level of expression of 7 novel Eph-related kinases examined and was barely detectable in adult tissues.

Claim 2; Page 44-47; 129pp; English.

Novel EPH-related PTK cDNA clone Cek7 (given in Q90653) and its variant Cek7+ (Q90661) were isolated from a chick embryo library in lambda gtl1, and another variant, Cek7' (Q90662), from a chick embryonic brain cDNA library in lambda gtl1. The variants may originate via alternative splicing of the same gene. Cek7 had the lowest level of expression of 7 novel Eph-related kinases examined and was barely detectable in adult tissues.

/note="forgan: eye; Vector: pT7T3D (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Ist strand cDNA was primed with Not I; Site_2: Eco RI; Ist strand cDNA was size selected, ligated to Eco RI sites of a modified pT7T3 vector (Pharmacia). The retinas were obtained from a 55 year old Caucasian and total cellular poly(A)+ RNA was extracted 6 hrs after their removal. The retina RNA was extracted 6 hrs after their removal. The retina RNA was extracted 6 hrs after their removal. The retina RNA was shadly provided by Roderick R. McInnes M.D. Ph.D. from the University of Toronto. Library constructed by Bento Soares and M.Fatima Bonaldo. " 6 others

/note="Vector: p2ero-2 (Invitrogen); Site_1: EcoRV;
Genomic DNA was isolated from stationary phase cells. For
this library, DNA was sheared to give a tight size
distribution of 1-1.5kb fragments, blunt-ended with T4 DNA
polymerase, dephosphorylated with Shrimp Alkaline
Phosphatase and ligated into p2ero-2 vector's EcoRV site."
